Using the Layers feature A `_layer_` is an area within the image where the pixels are overlaid to create a new layer of data, so that the resulting effect can be selectively applied to a specific layer, as you would apply layers of a cake or pastry to a cake or pastry slab. Each layer in Photoshop is called a `_group_`. A layer can be added to the canvas, allowing you to edit and create content on that layer. While adding layers, you can see the layer's transparency color, which is represented by the color the pixels inside that layer are shown in the Layers palette. If the layer contains a background, you can see the original image by clicking the View button and switching to the Background layer. Layers are used to organize your image into smaller, manageable pieces. Most of the time, a layer

represents a single object in an image. But a layer can be used to organize an image that has many smaller, but related objects.

A: The build process automatically create a folder called www inside the ionic folder which contains all the built app assets. This is a problem in windows builds since there is no httpd.exe. To make this work, the simplest solution is just to do ionic serve --prod 2015 in Ireland The following lists events in the year 2015 in Ireland. Incumbents President: Michael D.
